MURU Scientific Review Feedback Form

Internal manuscript review | Reviewer details remain blank until a real review is conducted

Thank you for considering a technical review of the MURU-WUR-v2 internal manuscript. Please assess only the materials you received. The current external MSnLib result is modest and conditional; the central open issue is the physical interpretation and transfer of collision-energy coordinates. You may leave any item blank or explain that it is outside your expertise.

Review record

Field	Reviewer entry
Reviewer name and current affiliation	_____
Relevant expertise	_____
Date received / version reviewed	_____
Materials examined (list versions/files)	_____
Prior collaboration, intellectual overlap, or potential conflict	_____

Overall assessment

Question	Response
Is the research question clear and scientifically useful?	☐ Yes ☐ Partly ☐ No Notes: _____
Are the model and scalar endpoint adequately described?	☐ Yes ☐ Partly ☐ No Notes: _____
Are the external results interpreted within their limits?	☐ Yes ☐ Partly ☐ No Notes: _____
Can the supported calculations be independently reconstructed from the supplied materials?	☐ Yes ☐ Partly ☐ No Notes: _____
Overall recommendation	☐ Ready for further review ☐ Major revision ☐ Further data needed ☐ Other

Collision-energy and analytical chemistry review

Issue / question	Evidence, concern, or requested change
Are the source mzML collision-energy annotations and their units interpreted correctly?	
Does the manuscript distinguish eV from NCE and numerical adapter values clearly?	
Is the physical interpretation of the fixed adapter justified?	
Are cross-instrument transfer claims appropriately limited?	
Is μ a meaningful and reproducible fragmentation-extent endpoint?	

Statistical and model-evaluation review

Issue / question	Evidence, concern, or requested change
Is the scaffold bootstrap described and interpreted correctly?	
Is the 2.93% relative RMSE reduction characterized proportionately?	
Is the failed 5% practical criterion clear?	
Are adverse novelty and tail-risk findings adequately reported?	
Are candidate/reference implementation differences material to interpretation?	

Detailed comments

Major scientific concerns

_____

_____

_____

Major methodological concerns

_____

_____

_____

Data provenance or rights concerns

_____

_____

_____

Minor or editorial comments

_____

_____

Requested revisions and supporting evidence

_____

_____

_____

Evidence boundaries and follow-up

Question	Reviewer response
Which conclusions are supported by the evidence reviewed?	
Which statements should be narrowed, qualified, or removed?	
What additional file, method record, or experiment would resolve remaining uncertainty?	
May the project team contact you with a focused follow-up question?	☐ Yes ☐ No Contact route provided separately
